Dear Sir;

Preliminary Amendment

All of the claims standing for examination are reproduced below in their last amended form. There are no amendments herein made to the claims in this preliminary amendment.

1. (Amended) In a communication center having agent workstations, a system for enabling a remote agent, using a light computerized device having insufficient power to operate as a workstation of the communication center, to access and operate as an agent with full access to data and software tools of the communication center, the system comprising:

- a proxy server executing a software suite;
- a first two-way data link between the proxy server and a workstation at the communication center; and
